SUMMARY

Full-stack engineer with hands-on experience in JavaScript and React paired with ASP.NET Core on the backend. Shipped a containerized, CI/CD-deployed task management app on Azure Kubernetes Service in under six months and executed a security overhaul of production APIs. Proficient with Docker, Kubernetes, Terraform, Azure DevOps and PostgreSQL, now building scalable solutions as a Software Engineer at Blue Line Solutions.

EXPERIENCE

Blue Line Solutions

Jul 2026 - Present

Software Engineer

My Learning Tracker

Oct 2025 - Present

Full-Stack Software Engineer

- Shipped a full-stack task management application from empty repo to production on Azure Kubernetes Service in under six months, using React 19 and ASP.NET Core (.NET 8) with PostgreSQL data persistence, containerized with Docker and deployed through fully automated Azure DevOps CI/CD pipelines.
- Hardened a live production API against XSS injection and traffic spikes by implementing ASP.NET Core Identity with JWT, Google/GitHub OAuth, user-scoped task ownership, API rate limiting, input validation, and Kestrel body-size caps; upgraded backend from .NET 7 to .NET 8.
- Executed zero-downtime migration from AKS to Vercel/Render after Azure credits expired, architecting a monorepo with rewrites routing API calls to a Render-hosted ASP.NET Core service, replacing the NGINX reverse-proxy container, and migrating to Neon serverless Postgres while root-causing CORS mismatches, Docker hostname resolution bugs, and platform-specific node_modules conflicts.
- Provisioned Azure infrastructure with Terraform (Storage Account, DNS Zone, RBAC role assignments) as reproducible infrastructure as code, taking ownership of domain pairing through Porkbun and SSL configuration via Azure Static Web Apps.
- Built a Cypress end-to-end test suite covering CRUD operations and authentication workflows across the React UI and ASP.NET Core API, integrating it into the Azure DevOps CI pipeline for automated test runs.

Personal Portfolio

2025 - Present

Full-Stack Software Engineer

- Provisioned and maintained infrastructure-as-code in Terraform for Azure DNS, Storage Accounts, and Static Web Apps, reducing manual configuration overhead and enabling repeatable deployments.
- Executed multi-phase cloud migration strategy, progressively moving portfolio site from Azure Blob Storage to Static Web Apps to Vercel-backed hosting based on performance and cost optimization.
- Implemented automated SSL certificate management and continuous deployment pipeline to Vercel, enabling instant site updates on code commits with zero manual intervention.
- Developed a developer portfolio at kylehmitchell.com serving as the public-facing showcase for live deployed applications, linking directly to the production task management platform and project source repositories.

SKILLS

Languages & Frameworks: C#, JavaScript, SQL, HTML, CSS, React 19, ASP.NET Core (.NET 8), Entity Framework Core

DevOps & Infrastructure: Azure DevOps, Docker, Kubernetes, Terraform, GitHub Actions, NGINX, WSL2, Azure Blob Storage, Azure DNS

Cloud: Azure Static Web Apps, Azure Kubernetes, Azure DNS, Azure Blob Storage, Azure

Databases & Data: PostgreSQL, SQL Server, Neon (serverless Postgres)

Security & Authentication: ASP.NET Core Identity, JWT, OAuth 2.0 (Google, GitHub), Input Validation, Rate Limiting, CORS, HTTPS/TLS

Testing: Cypress

SRE & Production Practices: Root-cause Debugging, Zero-downtime Deployments, Log Analysis, Monitoring & Observability

EDUCATION

Columbus State University

2018 - 2021

CS, Software Systems Track; studies interrupted by injury with one year remaining.

CERTIFICATION

Microsoft Azure Fundamentals (AZ-900) - Microsoft

April 16, 2026
